Letter from the President

Dear Colleagues and Members of the Androgen Society,

I am honored to be the President of the Androgen Society. I am excited to lead the Society as we continue to grow and expand our educational offerings.

Prior to join the Androgen Society Executive Board, I was a member of the Scientific Advisory Board. I have been a member of the Androgen Society since 2014. I have attended the Annual Meeting and the Fall Meeting. I have found the meetings to be very informative and a great opportunity to network with colleagues.

The Annual Meeting in April 2018 will be held in Orlando, Florida. The Annual Meeting will be a two day meeting with a pre-conference course on the first day. The pre-conference course will be a basic course on testosterone. The course will be geared towards physicians who are new to testosterone therapy. The course will be a great opportunity for physicians who are interested in learning more about testosterone therapy.

The Annual Meeting will also have a Fellows Track. The Fellows Track will be a great opportunity for fellows to learn more about testosterone therapy. The Fellows Track will be a great opportunity for fellows to network with other fellows and physicians who are interested in testosterone therapy.

The Fall Meeting will be held in Las Vegas, Nevada. The Fall Meeting will be a two day meeting with a pre-conference course on the first day. The pre-conference course will be a basic course on testosterone. The course will be geared towards physicians who are new to testosterone therapy. The course will be a great opportunity for physicians who are interested in learning more about testosterone therapy.

The Fall Meeting will also have a Fellows Track. The Fellows Track will be a great opportunity for fellows to learn more about testosterone therapy. The Fellows Track will be a great opportunity for fellows to network with other fellows and physicians who are interested in testosterone therapy.

Sincerely,
Mark Moore, MD
President, The Androgen Society

Dr. Ed Hodge
Treasurer, The Androgen Society

Testosterone Replacement in Men with Sexual Dysfunction: A Clinical Practice Guideline from the American College of Physicians

Mulhall JP, Trost LW, Brannigan RE, et al. J Sex Med. 2018;15(3):314-335.

Abstract

Introduction: Testosterone replacement therapy (TRT) is commonly prescribed for men with sexual dysfunction, but there is limited evidence to support its use.

Aim: To provide clinical practice guidelines for the evaluation and treatment of men with sexual dysfunction who are candidates for TRT.

Methods: A systematic review of the literature was conducted to identify studies that evaluated the efficacy and safety of TRT in men with sexual dysfunction. The quality of evidence was graded using the GRADE system. Recommendations were developed by consensus of the guideline panel.

Results: The panel identified 10 randomized controlled trials (RCTs) that evaluated the efficacy of TRT in men with sexual dysfunction. The quality of evidence was generally low to moderate. The panel made 10 recommendations, including 5 strong recommendations and 5 conditional recommendations.

Conclusions: The panel recommends that TRT be considered in men with sexual dysfunction who have a low serum testosterone level and who are willing to undergo TRT. The panel also recommends that men with sexual dysfunction who are not candidates for TRT be offered other treatments, such as phosphodiesterase type 5 inhibitors, psychosexual therapy, and lifestyle modifications.

Strength and Limitations: The strength of this guideline is that it is based on a systematic review of the literature and that the recommendations were developed by consensus of a panel of experts. The limitations of this guideline are that the quality of evidence was generally low to moderate and that the panel did not include any men with sexual dysfunction who were not candidates for TRT.

Conclusion: The panel recommends that TRT be considered in men with sexual dysfunction who have a low serum testosterone level and who are willing to undergo TRT. The panel also recommends that men with sexual dysfunction who are not candidates for TRT be offered other treatments, such as phosphodiesterase type 5 inhibitors, psychosexual therapy, and lifestyle modifications.

Why is this important?

Testosterone replacement therapy (TRT) is commonly prescribed for men with sexual dysfunction, but there is limited evidence to support its use. This guideline provides clinical practice guidelines for the evaluation and treatment of men with sexual dysfunction who are candidates for TRT.

What is the bottom line?

The panel recommends that TRT be considered in men with sexual dysfunction who have a low serum testosterone level and who are willing to undergo TRT. The panel also recommends that men with sexual dysfunction who are not candidates for TRT be offered other treatments, such as phosphodiesterase type 5 inhibitors, psychosexual therapy, and lifestyle modifications.

Where can I find more information?

The full guideline is available at the Journal of Sexual Medicine website: https://www.jsm.jsexmed.org/article/S1743-6095(18)30001-0/fulltext

Summary of the Current Review by Jon H. Abbott MD

This guideline provides clinical practice guidelines for the evaluation and treatment of men with sexual dysfunction who are candidates for TRT.
